Attention: Advisor or Computer Science Instructor
A.c.e. High schools
611 Jefferson Street
Iron River, MI 49935
To whom it May Concern,

The Association for Computing Machinery(ACM) at Saginaw Valley State University will be conducting the High School Programming Competition on 2011-03-04. This contest has been an annual event hosted by the ACM student chapter at SVSU for over two decades. We are extended an invitation to your high school to attend this year's competition.

This year we hope to expand our competition to more Michigan schools. Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: w5z9s7uj

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Sincerely yours,

Aaron Maturen

To whom it May Concern,

The Association for Computing Machinery(ACM) at Saginaw Valley State University will be conducting the High School Programming Competition on 2011-03-04. This contest has been an annual event hosted by the ACM student chapter at SVSU for over two decades. We are extended an invitation to your high school to attend this year's competition.

This year we hope to expand our competition to more Michigan schools. Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: u2k11i1q

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

To whom it May Concern,

The Association for Computing Machinery(ACM) at Saginaw Valley State University will be conducting the High School Programming Competition on 2011-03-04. This contest has been an annual event hosted by the ACM student chapter at SVSU for over two decades. We are extended an invitation to your high school to attend this year's competition.

This year we hope to expand our competition to more Michigan schools. Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: g3umrx50

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

To whom it May Concern,

The Association for Computing Machinery(ACM) at Saginaw Valley State University will be conducting the High School Programming Competition on 2011-03-04. This contest has been an annual event hosted by the ACM student chapter at SVSU for over two decades. We are extended an invitation to your high school to attend this year's competition.

This year we hope to expand our competition to more Michigan schools. Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: 98srymbm

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

The Association for Computing Machinery(ACM) at Saginaw Valley State University will be conducting the High School Programming Competition on 2011-03-04. This contest has been an annual event hosted by the ACM student chapter at SVSU for over two decades. We are extended an invitation to your high school to attend this year's competition.

This year we hope to expand our competition to more Michigan schools. Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: zmcsi4vb

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

The Association for Computing Machinery(ACM) at Saginaw Valley State University will be conducting the High School Programming Competition on 2011-03-04. This contest has been an annual event hosted by the ACM student chapter at SVSU for over two decades. We are extended an invitation to your high school to attend this year's competition.

This year we hope to expand our competition to more Michigan schools. Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: 7pcza5mi

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

This contest has been an annual event hosted by the ACM student chapter at SVSU for over two decades. We are extended an invitation to your high school to attend this year's competition.

This year we hope to expand our competition to more Michigan schools. Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: xqjccm3

This contest has been an annual event hosted by the ACM student chapter at SVSU for over two decades. We are extended an invitation to your high school to attend this year's competition.

This year we hope to expand our competition to more Michigan schools. Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

This year we hope to expand our competition to more Michigan schools. Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: c1xg8ewy

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: vc2j

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: zxtgl40

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: k1bfz1z

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: m2nll12h

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: 70tkjlwc

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: 39mda4t2

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: 1lnpybx1

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

This year we hope to expand our competition to more Michigan schools. Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark sme interest in your school's young programmers to come out and show nt only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: zuuba70

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: 2tr1cwdj

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: iesv2c64

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: itizumn

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: 74n5s45

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: zmhedls4

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes. Hopefully, this may spark some interest in your school's young programmers to come out and show not only us, but other local students what they can do. Teams consist of up to three students. Multiple teams from each school are encouraged. T-shirts, continental breakfast, and lunch are included for free. Plaques are given to the top contenders, as are assorted prizes donated by local businesses.

This year the programming contest will support Gnu C++, Java, and Python. All programs are expected to be command line programs, read stdin for the input and output to stdout. Contest rules can be found on the competition's website (<http://acm.svsu.edu/hspc>). Registration begins immediately via our online registration using your school's id number listed below. Registration must be received by 2011-02-11

School ID: 1lshbkh4

Thank you for your time and we hope to see your school at the upcoming programming contest. If you have any questions, please email me, Aaron Maturen, at atmature@svsu.edu.

Sincerely yours,

Aaron Maturen

To whom it May Concern,

The Association for Computing Machinery(ACM) at Saginaw Valley State University will be conducting the High School Programming Competition on 2011-03-04. This contest has been an annual event hosted by the ACM student chapter at SVSU for over two decades. We are extended an invitation to your high school to attend this year's competition.

This year we hope to expand our competition to more Michigan schools. Even if your school does not have any computer programming classes, you may be surprised to find out that some of your students can indeed program. We ask that you post our flyer in any of your computer classes or mathematics classes.
